I have 9 years of experience in backend software development. Currently, I work with modular monolithic and microservices architectures, building Web APIs in .NET 8 and 9 with C#.

Experience

- **Mid-Level Backend Developer - Mb Labs (Apr 2023 - Present)**

-I improved the usability of the Backoffice and Marketplace system, with approximately 20,000 daily accesses, by automating manual reports through the creation of jobs in C# and .NET with asynchronous methods in a separate module.
-Enhanced routine processing of 1,000-4,000 postal code records by creating a fallback routine that queries another API when the primary fails; reduced processing time from 30 minutes to 5 minutes using parallelism and asynchronous processes.
-Improved application notifications by implementing email and push notifications with RabbitMQ, DomainEvents, and WorkerServices in asynchronous processes.
Stack: C#, .NET 8 & 9, .NET Framework, React, Oracle, PostgreSQL, SQL Server, modular monolithic architecture, microservices architecture, RabbitMQ, AWS Elastic Beanstalk, Git, CI/CD, Bitbucket Pipelines, Docker, xUnit.

- **Mid-Level Backend Developer - Navita (Oct 2020 - Mar 2023)**

-Developed a scalable API from scratch to integrate with the company's main client, handling 1,000-2,000 requestsvusing Web APIs in .NET Core 3.1, Docker, and AWS ECS.

-Optimized the microservice architecture in .NET Core 3.1 and C#, creating asynchronous communication with RabbitMQ to eliminate critical bugs that caused timeouts and performance issues.

- Restored the API responsible for retrieving detailed expense data by fixing both technical and business logic issues.

Stack: C#, .NET Core 3.1, PostgreSQL, SQL Server, AWS, AWS ECS, Docker, Bitbucket, Microservices, RabbitMQ.

- **Junior Backend Developer - Linx (Mar 2020 - Sep 2020)**

Maintained and developed features for the retail POS system.
Stack: .NET Framework, C#, WPF, SQL Server**.**

Junior Backend Developer - DC Logistics (Jan 2019 - Feb 2020)

- Automated the foreign trade system by creating a WebBrowser in .NET Framework running in a service loop to check cargo updates and automatically input them into the system, reducing manual monitoring.

- Developed a productivity dashboard for employees using ViewBag, .NET Core, and JavaScript, providing managers with better metrics for decision-making.

Stack: Delphi, C#, .NET Framework, .NET Core 3.1, JavaScript, ViewBag, SqlServer.

- **Junior Backend Developer – Allog (Dez 2017- Jan. 2019)**

- Improved the legacy foreign trade system by creating SQL reports with PL/SQL, providing users with better information and metrics.

- Optimized performance by enhancing reports and PL/SQL queries, resolving frequent system crashes.

Stack: SQL Server, Node.Js, TypeScript, Mongodb, NoSQL

- **Programming Intern - Evolutecnet Sistemas: Set. 2016- Dez .2017**

First professional experience in the software industry, performing maintenance and improvements on the company's port management system.
Stack: Delphi, SQL Server

Education

Instituto Federal Catarinense (Camboriu/SC Campus)

Bachelor's Degree in Internet Systems - Mar 2015 - Dec 2017
